Speed Configuration Guide

for configuring Shopping Cart & Bidding plugin

▶ Shopping Cart & Bidding Plugin

The shopping cart & bidding is delivered as a plugin and is specifically designed to run on the general script. The Plugin is compatible with Flynax **4.1, 4.2** and **4.3**.

The Plugin is intended for those Flynax customers/site owners who want their sites to work as online stores. Before enabling the plugin you shall realize all possible issues and responsibility you will have to take when selling items through your site, and provide your users with all necessary policies and agreements.

The Plugin is made up of two large modules: the shopping cart and the bidding module. The shopping cart along with the most popular shipping services allows your users to purchase items online through your site and have them delivered with a delivery service. The bidding module allows your users to start auctions and sell their items to the highest bidders.

Payments from users can be sent either to the site owner or to sellers' accounts.

Note: Flynax shall not be involved in any disputes between you and your users in relation to payments and shipment of items.

▶ Installing the Plugin

To install the Plugin go to: **Admin panel > Plugins > Browse** Install the plugin from the admin panel under the Plugin section;
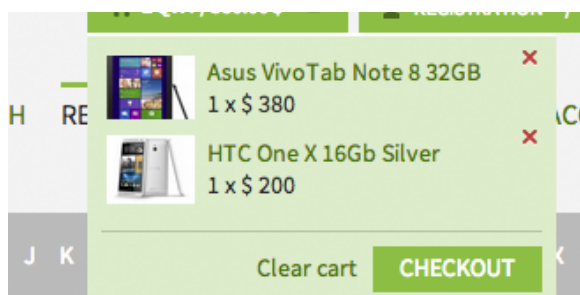

After installing the Plugin you will need to configure it.

▶ Configuring the Plugin

To configure the plugin go to: **Admin Panel > General Configurations > Shopping Cart & Bidding > Settings** and fill in the following fields:

Recipient of payments - a person who will be receiving payments from users for items sold. Payments can be sent either to the site owner or to sellers.

Visible number of items in cart – a number of viewable items in the shopping cart box (see below 1) in the user interface. If a number of items exceeds the limit the items will be hidden.

Position of price fields – the fields associated with the Plugin are grouped in a box on the submit form. You have the ability to manage position of the Plugin-related fields on the submit form.

Price field in listings – a price field you want to use in the Plugin and that will be used for calculation of a total amount (see below).

Weight unit – units for measuring weight; the parameter is used for calculating shipping costs.

Shipping methods – available shipping services (see below).

Currency RSS feed – an online service that provides exchange rates. The parameter is used for calculating shipping costs.

Make available to – selects user groups/account types to which the shopping cart will be available.

Automatic rate – with this option enabled the auction module will be making automatic bids on those auctions that don't have any bids from users within a certain time period. The function is available for the auction module only.

Automatic rate interval – an interval at which the plugin will be making bids on auction (see Automatic rate above).

▶ # Auctioning an item (bidding module)

To auction an item you are supposed to fill in the following feids:

Starting price – a starting auction price.

Reserve price – a minimum price for which the seller is ready to sell his item.

Buy now – a price for which a user can purchase an item without participating in the auction. If a user purchases an time for a buy-now price all bidders will get a notification about the item sold.

Bid step – a set amount between the current bid and the next one, for example: a bid step is $5 and the current bid is 40USD then the next bid must be at least 45USD, but can be more.

Duration – a time period during which bidders will be able to bid on the auction before it will be closed and a winner announced.

Configuring Cron

To ensure correct performance of the auction module you should configure the cron jobs for your site (cron/index.php). You can learn how to configure the cron jobs on our forum:

http://www.flynax.com/forum/showthread.php?3-Cron-Jobs-setup

Available payment gateways

- Paypal

- 2Co

- Bank Transfer (offline payments)

Configuring the Plugin in seller accounts

If you select sellers as recipients of payments they will have to configure the plugin from their accounts: Account Area > My Profile > Shopping Cart settings

They must enable at least one of the payment gateways to receive payments from users (see below).
